An app that helps you decide what to eat for dinner, and can gives you recipes based on what you want to eat or what you have in the fridge. For those indecisive eaters

document assumptions:
-user do not have access to more exotic ingredients
-user must be old enough to cook, read instructions, or drive to restaurant
-user must have cookware and kitchen

Problem Statement
-identify if you want to cook at home or eat at a restaurant
-idenitfy user motivation for finding help with what you need
-describe appetite (how hungry are you)

user would come back bc:
-many type of food suggestions
-user friendly, easy to understand how to use app
-address need they have and satisfy with results

Summarize at least 3 key findings:
-everybody that filled out the survey eats at a restaurant once a week
-budget and time are the main factors to determine if one is eating at a restaurant or cooking
-100% of the people who took the survey have staple foods at their house

Do you have staple foods at your house (rice, meats, vegetables, etc)?

12 responses
-we were surprised to see all partipants eat at a restaurant at least once a week

-addressing problem statement: we felt like we answered 2 of the problem statements, the only one we didnt really answer was descibing your appetite and that is because we felt like it wasnt a screening question, it would be answered if you used the app.
